

Computer Science

Richview Middle School

The mission of this class is to familiarize students with business software, the proper use of computer tools, problem solving methodology, and basic coding to support academic and career success.

Every student that comes into my classroom with the ability to succeed in gaining knowledge to better prepare the student for life in a professional and social environment.

Students are encouraged to embrace their inner creativity and engage in thoughtful reflection on his or her unique strengths.

- Computer Literacy provides the Richview student with a foundation in technical writing that enables the student to better communicate ideas, images, meaning, and concepts. This class broadens the student's available tools while maintaining high standards for the products.
- Students in 7th and 8th grade will focus on computer programming using basic HTML, CSS, and Java programming languages.
- Classroom instruction is done using Canvas and Microsoft OneNote. Both programs can be accessed from home using the student resource page.
- Additional programs utilized for this class are Code.org and Typing.com.

Areas of instruction for this class:

- Digital Citizenship
- Touch Typing
